

## Full-Stack Developer: Ruby on Rails & React.js

---

### About Me

Full-stack developer with strong Ruby on Rails and React.js experience, comfortable owning the UI layer of data-heavy applications. I build clean, responsive, accessible interfaces from Figma designs and written requirements, and enjoy turning complex data into clear, usable screens. Currently based in the UK and seeking a role where I can deepen my front-end craft while contributing production Rails and React from day one.

---

### Education:

- University of Northampton (Sept 2024 – March 2026)  
MSc. Computing (Merit)
  - Comsats University Islamabad (2019 – 2022)  
BSc. Computer Science (3.51 / 4.00)
- 

### Work Experience:

#### Research Assistant: University of Northampton (2024 – 2026)

- Conducting research in collaboration with faculty from multiple departments to create a Peer Marking System to mark the tasks done in groups.
- Developing a full-scale application to implement the research work using Ruby on Rails.

#### Software Engineer: Developers Incorporated (2022 – 2024)

- Developed and maintained large-scale educational software using Ruby on Rails for technical institutions across the USA.
- Designed, developed, and consumed RESTful APIs, using Postman for API testing, validation, and debugging during development and integration.
- Built data processing and transformation workflows to generate and exchange CSV, JSON, and XML data from large datasets, ensuring data accuracy and integrity.
- Automated complex student reporting by implementing business logic and customer-specific filtering requirements to produce tailored reports.
- Implemented asynchronous background processing using Sidekiq and Active Job to improve application performance and efficiently handle long-running tasks.
- Gathered requirements directly from clients, translated business needs into technical solutions, demonstrated features on staging environments, and deployed successful releases to production.
- Wrote and maintained automated test cases for new and existing features, improving code quality and reducing regressions.
- Debugged production issues, identified root causes, and implemented robust fixes with appropriate error handling to improve system reliability.
- Built and maintained React.js interfaces for a large-scale educational platform, creating reusable functional components with built-in and custom hooks to fetch, filter and display data from Rails APIs.
- Developed dedicated API service classes to consume RESTful endpoints, handling queries, filtering and error states, and rendered large datasets into clear, performant UI.

- Managed component and application state using React hooks and props, keeping data flow predictable across complex, data-driven views.
- Integrated React front-end components with the Ruby on Rails backend, wiring UI to server-rendered views and API data.
- Implemented responsive, accessible UI from Figma mockups and written requirements using CSS, Tailwind, Flexbox and Grid, with attention to spacing, consistency and cross-device behaviour.
- Wrote unit tests for JavaScript/React components with Jest to catch regressions and improve reliability.
- Worked in a collaborative Git workflow — feature branches, pull requests and code review — with cross-functional teams
- Led technical training for individuals from non-technical backgrounds, teaching programming and web development fundamentals and helping learners transition into technology careers.

### **Head Industrial Coordinator: Comsats University Islamabad (2020 – 2022)**

- Led a team of 70+ students as a coordinator ensuring cross compatibility of different teams to ensure successful planning and execution of mega industrial events.
  - Coordinated on-campus recruitment drives helping software companies recruit over 200 resources from Computer Science Department.
- 

## **Skills:**

**Front End:** React.js, HTML, CSS, JS, Bootstrap, Material-UI, Chakra-UI, Tailwind CSS

**Backe End:** Ruby on Rails, Node.js (Express.js)

**Databases:** SQL, MongoDB, Graph-DB (Neo4J)

**Testing:** Rails Testing using Selenium web driver and Capybara, JS Testing using Jest

**Mobile App development:** React Native

**Version Control:** Git / Git Hub

**Deployment:** Heroku, Fly.io, Vercel

**Others:** Technical Writing, Designing, Content Writing, Video Editing, Photo Editing

## **Achievements:**

Rising Star Award: Developers Incorporated

Best Lead Trainer Award: Developers Incorporated

3<sup>rd</sup> Position in Final Year Projects and Careers Expo: Comsats University Islamabad.

Guest Speaker on the topic Use of Computers and Robotics in Education: Islamabad Model College

Guest Speaker: KIMS Secondary School
